

DEVELOPER JOB BRIEF — ArtiZone Spa & Clinic Booking System

Project: Custom Booking & Admin Dashboard | **Location:** Remote | **Budget:** \$3,000–\$8,000

About ArtiZone

ArtiZone is a beauty and body slimming center in Amman, Jordan. We currently capture booking requests through a web form and WhatsApp, but staff manually reconcile everything — no slot reservation, no availability checking. We need a custom scheduling system built to our exact specifications.

Website: <https://artizonespa.com> Location: Complex Arjan, Amman, Jordan Market: Arabic-speaking, WhatsApp-first

Project Overview

Build a complete booking and admin dashboard system for a spa/clinic with the following non-negotiable requirements:

- **WhatsApp-native workflow** — confirmations, reminders, waitlist offers via WhatsApp Business Cloud API
 - **Arabic language support** — admin dashboard and customer communications in Arabic
 - **Multi-resource scheduling** — every appointment occupies BOTH a practitioner AND a room/machine simultaneously
 - **Database-level double-booking prevention** — PostgreSQL exclusion constraints (not app-level checks)
 - **Mobile-first** — 80%+ of customers book via mobile
-

Deliverables

Phase 1 — MVP (2-3 weeks, \$2,000–\$4,000)

1. PostgreSQL database with full schema (provided)
2. REST API (8 endpoints) — public booking, admin dashboard, confirm/decline, availability queries
3. Public booking form — embeddable widget for GoDaddy website, mobile-first
4. Admin dashboard — password-protected, pending queue, confirm modal with live availability check
5. WhatsApp Business API integration — outbound confirmation templates
6. Deployment to cloud hosting (Railway/Render/DigitalOcean)

Phase 2 — Full System (+2-3 weeks, \$1,500–\$3,000)

1. Calendar day/week view by practitioner
2. Automated 24h/2h WhatsApp reminders

- 3. Staff time-off management
- 4. Waitlist system with auto-offer on cancellations
- 5. Packages & memberships (session bundles + monthly plans)
- 6. Demand reporting dashboard (heatmap + service ranking)
- 7. Customer package redemption at booking

Phase 3 — Integration (+1-2 weeks, \$500–\$1,500)

- 1. Loyalty points bridge (connect booking completions to rewards system)
- 2. Customer portal (view bookings, reschedule)
- 3. Online payment integration (Jordanian e-wallets, cash tracking)

Technical Requirements

Required Stack

Component	Requirement
Database	PostgreSQL 14+ (exclusion constraints require btree_gist extension)
Backend	Node.js + Express (or NestJS)
Database Access	node-postgres (pg) —raw SQL preferred for exclusion constraints
Frontend (Admin)	React + Tailwind CSS (or Vue 3 + Tailwind)
Frontend (Public)	Vanilla JS embeddable widget
Auth	JWT + bcrypt (staff dashboard only)
WhatsApp	WhatsApp Business Cloud API (Meta Business account)
Hosting	Railway, Render, or DigitalOcean
Version Control	GitHub (private repo)

Critical Technical Constraints

- 1. **All timestamps stored in UTC** — convert to local (Asia/Amman) only for display
- 2. **Exclusion constraints at database level** — must use PostgreSQL’s EXCLUDE USING gist to prevent double-booking
- 3. **Phone numbers in E.164 format** — Jordan: +962 followed by number with leading zero dropped (e.g., 0790412758 → +962790412758)
- 4. **Arabic RTL support** — dashboard must support Arabic text and right-to-left layout
- 5. **Mobile-first responsive** — booking form must work flawlessly on iPhone and Android

Provided Materials

The following will be provided to the hired developer:

- 1. **Complete SQL Schema** — 13 tables with seed data, indexes, exclusion constraints (.sql file)

2. **API Specification** — Full REST API contract with request/response shapes, error codes, query parameters
3. **Phase 1 MVP Scope** — Detailed breakdown of screens, endpoints, success criteria
4. **Wireframe References** — Screenshots of dashboard layout, confirm modal, calendar view (from design guide)
5. **Seed Data** — 7 services, 4 rooms/machines, 3 staff members, working hours, 2 packages — ready to load
6. **GoDaddy Integration Guide** — How to embed the booking widget on existing website

Skills Required

Must-Have

- 3+ years Node.js + PostgreSQL production experience
- Deep knowledge of PostgreSQL constraints, indexes, and query optimization
- Experience with WhatsApp Business Cloud API or Meta messaging APIs
- React or Vue.js frontend development (mobile-first, responsive)
- Arabic RTL web development experience (or willingness to implement)
- Git, CI/CD, cloud deployment (Railway/Render/DigitalOcean)

Nice-to-Have

- Previous spa/salon/clinic booking system experience
- Experience with PostgreSQL exclusion constraints (`btree_gist`)
- Arabic language skills (for UI/UX refinement)
- Stripe/Cliq/PayFort payment integration experience
- React Native or PWA experience

Evaluation Criteria

Criteria	Weight
PostgreSQL expertise (constraints, performance)	30%
Previous booking/scheduling system experience	25%
Mobile-first frontend quality	20%
WhatsApp/Meta API experience	15%
Communication & responsiveness	10%

Application Requirements

Please submit:

1. **Portfolio** — Links to 2-3 live projects (preferably booking/scheduling systems)
2. **Code sample** — One PostgreSQL schema or complex query you've written (GitHub gist or snippet)

3. **Approach summary** — How you'd implement the exclusion constraints and availability engine (200 words max)
 4. **Timeline estimate** — Breakdown by week for Phase 1 MVP
 5. **Rate** — Fixed price for Phase 1, hourly rate for Phase 2+3
 6. **Availability** — When can you start? How many hours/week can you commit?
-

Payment Terms

Milestone	Payment
Contract signed + repo access	20% upfront
Database + API complete (Phase 1 backend)	30%
Frontend + WhatsApp integration complete (Phase 1 frontend)	30%
Deployed live + tested + bug fixes	20%

Communication

- **Primary channel:** WhatsApp (ironic but true — it's our workflow)
 - **Secondary:** Email for formal deliverables and documentation
 - **Meetings:** Weekly video call (Zoom/Google Meet), 30 minutes
 - **Response time:** Within 24 hours on business days
-

Non-Disclosure

This project involves business logic, customer data models, and integration details. A standard NDA will be required before sharing the full technical specification.

Contact

To apply, send your portfolio + required materials to: [YOUR EMAIL] Subject line: "ArtiZone Booking System — [Your Name]"

Expected start date: Within 2 weeks of selection Project duration: 6–8 weeks total (all phases)
