

ArtiZone — Corrected `<head>` Blocks (EN + AR, with hreflang)

Handoff reference for the site maintainer. Replaces the current generic, duplicated meta tags that are identical across every route.

⚠ Read first — 4 things to confirm/adjust before shipping

1. **Arabic URL scheme.** This file assumes Arabic lives under an `/ar/` path prefix (e.g. `https://artizonespa.com/ar/laser-hair-removal-ammam`). If your site uses a query param (`?lang=ar`), a subdomain (`ar.artizonespa.com`), or Arabic slugs, **update every Arabic URL below to match your real routing.** hreflang only works if these URLs actually resolve.
 2. **These tags must be in the server's initial HTML response, per route** — not injected client-side after load. Crawlers and link-preview bots read the raw HTML. Setting them via JS after mount is too late. Use your framework's SSR / static per-page metadata, or a prerender step.
 3. **og:image paths.** Only `.../pages/home/hero` is confirmed to exist. Every other image path below is a **placeholder** — create the asset (or repoint to a real one) and verify it returns a 1200×630 image before launch. Don't leave them all pointing at the homepage hero, which is the current bug.
 4. **`<html>` attributes.** On Arabic pages set `<html lang="ar" dir="rtl">`. On English pages set `<html lang="en" dir="ltr">`. (These live on `<html>`, not in `<head>`, but they matter for SEO and layout.)
-

Shared tags — keep on EVERY page, unchanged

These already exist and are fine. The per-page blocks below only override title / description / canonical / og:* / twitter:* / hreflang. Leave these in place:

```
html
```

```
<meta name="viewport" content="width=device-width, initial-scale=1.0, viewport-fit=cover">
<meta name="theme-color" content="#0E2A3A">
<meta name="referrer" content="same-origin">
<meta name="ICBM" content="31.9539, 35.8833">
<meta name="geo.region" content="JO-AM">
<meta name="geo.placename" content="Amman, Jordan">
<meta name="geo.position" content="31.9539;35.8833">
<meta name="apple-mobile-web-app-capable" content="yes">
<meta name="apple-mobile-web-app-status-bar-style" content="black-translucent">
<meta name="apple-mobile-web-app-title" content="ArtiZone">
<meta name="mobile-web-app-capable" content="yes">
<meta name="twitter:card" content="summary_large_image">
<meta name="twitter:site" content="@artizone_clinic">
<meta property="og:site_name" content="ArtiZone Beauty & Aesthetic Clinic">
<meta property="og:type" content="website">
```

Tip: add `og:image:width` 1200 and `og:image:height` 630 alongside each page's `og:image`. They're already present site-wide, so keep them.

Per-page blocks

Each page has an **English** block and an **Arabic** block. The three `hreflang` `<link>` tags are intentionally **identical** in both language versions of the same page (every variant must self-reference and reference its siblings).

```

Remaining routes — extend the same pattern

The same fix applies to every other route. Give each its own title, description, canonical, og:url, og:image and the 3 hreflang tags. Routes still needing blocks:

- `/mens-grooming-amman` — "Men's Grooming in Amman | ArtiZone" / "العناية بالرجال في عمّان"

- `/services/nails-foot-care` — "Nails & Foot Care in Amman | ArtiZone" / "العناية بالأظافر والقدمين في عمان"
- `/before-after` — "Before & After Results | ArtiZone Amman" / "نتائج قبل وبعد"
- `/loyalty` — "Rewards & Loyalty | ArtiZone Amman" / "نقاط الولاء والمكافآت"
- `/blog` — "Beauty Tips & News | ArtiZone Blog" / "مدونة أرتيزون"
- `/about` — "About ArtiZone | Beauty Clinic in Amman" / "عن أرتيزون"
- `/contact` — "Contact ArtiZone | Amman, Jordan" / "تواصل معنا"
- `/booking` — "Book an Appointment | ArtiZone Amman" / "احجز موعدك"

For thin/duplicate pages you don't want indexed separately (e.g. `/booking`), consider `<meta name="robots" content="noindex, follow">` instead of a unique title.

Verification checklist (after deploy)

- ☐ Each URL's **raw HTML** (View Source / `curl`) contains its own title & description — not the generic default.
- ☐ Google Search Console → URL Inspection → "View crawled page" shows the new tags and body content rendered.
- ☐ Facebook Sharing Debugger + WhatsApp link preview show the correct per-page title/image (re-scrape to clear cache).
- ☐ hreflang has **no errors** in Search Console → International Targeting (each URL resolves, references are reciprocal).
- ☐ Arabic pages serve `<html lang="ar" dir="rtl">`; English serve `<lang="en" dir="ltr">`.
- ☐ Every `og:image` returns a real, unique 1200×630 image (no 404s, not the homepage hero on every page).
- ☐ Add a `sitemap.xml` listing both EN and AR URLs, and reference it in `robots.txt`.
